

LED SIGN REPAIR

In today's digital age, LED signs have become a popular choice for businesses to enhance their brand visibility and communicate effectively with their target audience. However, like any technology, LED signs are susceptible to wear and tear, requiring timely repairs to maintain their functionality and impact.

CASE STUDY

AT A GLANCE

CHALLENGE

- LED sign malfunctioning
- Unable to use it to communicate with customers
- No technical expertise within the business to repair

SOLUTION

- Our comprehensive diagnostic testing showed a faulty LED driver and damaged power supply
- Parts were sourced and our expert engineers repaired both

BENEFITS

- Repair was quick and cost effective.
- Costly LED sign did not have to be replaced.

THE CHALLENGE

A petrol station had been experiencing issues with its LED sign, resulting in distorted images and flickering lights. The malfunctioning sign was not only detrimental to the companies brand image but also hindered their ability to communicate to customers effectively.

OUR SOLUTION

Eyedot initiated a comprehensive diagnostic process to identify the underlying issues. Through meticulous examination, it was determined that the problem was primarily caused by a faulty LED driver and damaged power supply. Through our extensive network, we sourced high-quality replacement components that were compatible with the existing LED sign and carried out the repair.

RESULTS

Following the completion of the LED sign repair, the sign once again displayed vibrant and clear visuals, effectively capturing the attention of passers-by.

Outsourcing the unit for repair meant that the company did not incur the huge costs of replacing the sign which is good for both the business and the environment.

Furthermore, by partnering with a professional electronic repair company, the customer benefitted from our expertise and received ongoing maintenance advice to extend the lifespan of the LED sign.

Eyedot have vast experience in LED sign repair throughout a wide range of industries. Get in touch with the team for a no-obligation conversation about your requirements.

We struck gold when we found Eyedot. When the OEM couldn't help us due to the age of our LED sign, we thought that we were going to be lumbered with the huge cost of replacing the unit.

The engineers at Eyedot are highly skilled and the unit was quickly assessed, diagnosed and repaired. I couldn't recommend them enough!
